

# TIPS: If your device is not supported by the ASMS native app

The native app for ASMS 2024 is created for the two most recent operating systems of iOS and Android. This means the current/latest operating system and one prior.

If you do not find the app in your app store this is very likely because your device's operating system is not supported. Please review the options available to you below.

**Option 1:** If your device is not supported (typically due to older operating systems), please use the Web Version of the app. We recommend you bookmark the URL on your device homescreen. The URL for Web Version is <https://ativ.me/wkm>.

**Option 2 (if you have Android older operating system):** You may try to install the .apk file directly on your device. We cannot guarantee success, but it may work depending upon your specific device and operating system.

On your device's browser, use this URL to download the .apk file: <https://ativ.me/wrc>

Next you will need these credentials to open the file: Username: **asms24** Password: **83b7**

**TIP:** You will be prompted to adjust settings to allow your device to download / install the file.

If successful you will find the app on your device. Open it and proceed to login to the app with your ASMS.org credentials.

## Manage your schedule Download the free app
